TIGO to Deploy Comverse Voice HUB in Bolivia and Honduras to Drive Growth, Boost Revenues

Visual Voicemail, Call Completion & Other Voice Services Enhance User Experience, Add Value to the Network

WAKEFIELD, Mass., January 28, 2010 – Comverse today announced that TIGO, the brand name of global communications group Millicom International Cellular S.A. (NASDAQ: MICC), is deploying the Comverse Voice HUB to bring voice-related services, such as Comverse Visual Voicemail and Call Completion to its mobile network in Bolivia and Honduras.

A major benefit of visual voicemail is that instead of calling in for voice messages, TIGO users now will have their voice messages sent to them immediately and automatically via multimedia message (MMS) and email. Knowing that voicemail messages will be heard more quickly, callers will be encouraged to leave more messages.

TIGO users also will enjoy a number of additional service enhancements. For example, when a caller tries to reach someone whose line is busy, Comverse Notify Me sends a text message as soon as the other party becomes available. In addition, TIGO users will know about all phone calls they miss because Comverse Who Called will send a text message immediately. The message will include details about the missed calls that the handset alone cannot report.

The convenience of these new services is complemented with an unprecedented level of control. Comverse Web Customer and Self Care provide TIGO users with a friendly and accessible place to adjust their services to their exact preferences, which improves user satisfaction.

“Deployment of these new capabilities is part of our ongoing commitment to our customers to provide them with the best user experience based on the latest world-

class services,” said TIGO CEO Juan Carlos Acosta. “Comverse helps us provide services that keep our subscribers engaged and pleased.”

“We are gratified that many Comverse customers in all regions return to us for additional services,” said Dror Bin, President of Global Sales at Comverse, the world's leading supplier of software and systems enabling value-added messaging and content services, converged billing and active customer management, and IP communications.

“Expanding our relationship with TIGO underscores the success of other Comverse solutions they have been using for years, such as Business Support Systems, text and multimedia messaging, and more,” Bin said.

Comverse Voice HUB is part of the Comverse HUB Value-Added Services, which spans voice, messaging, mobile Internet and mobile advertising. Comverse HUB is a synergistic framework that enables service providers to maximize their business performance and augment their position in the market.

At the upcoming Mobile World Congress meeting (Feb. 15 to 18) in Barcelona, visitors are invited to Hall 8 Booth B83 to experience the Comverse Voice HUB and a wide range of Comverse demos. To schedule a meeting with Comverse, visitors are encouraged to make an [online](#) request. Also, Comverse’s Yaniv Zuckerman, vice president of Portfolio Marketing, will participate on a panel discussion, “Strategies for Growth – Compelling Customer Service” on Tuesday, Feb. 16 from 4 to 5:30 p.m.
